Questify Index

This handbook contains everything you need to know to configure your hero, complete quests, manage skills, and utilize the responsive notepad with sound alerts.

01. Getting Started Page 3

02. Quest & Daily Tasks Page 4

03. Skill Tree & Titles Page 5

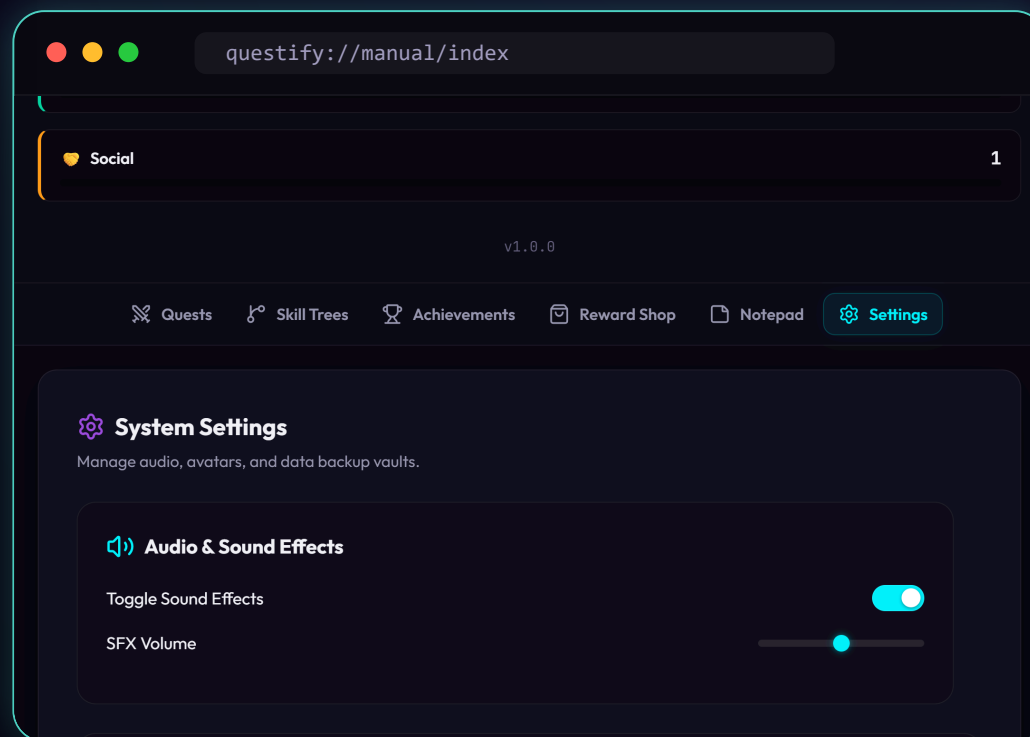

04. The Reward Shop Page 6

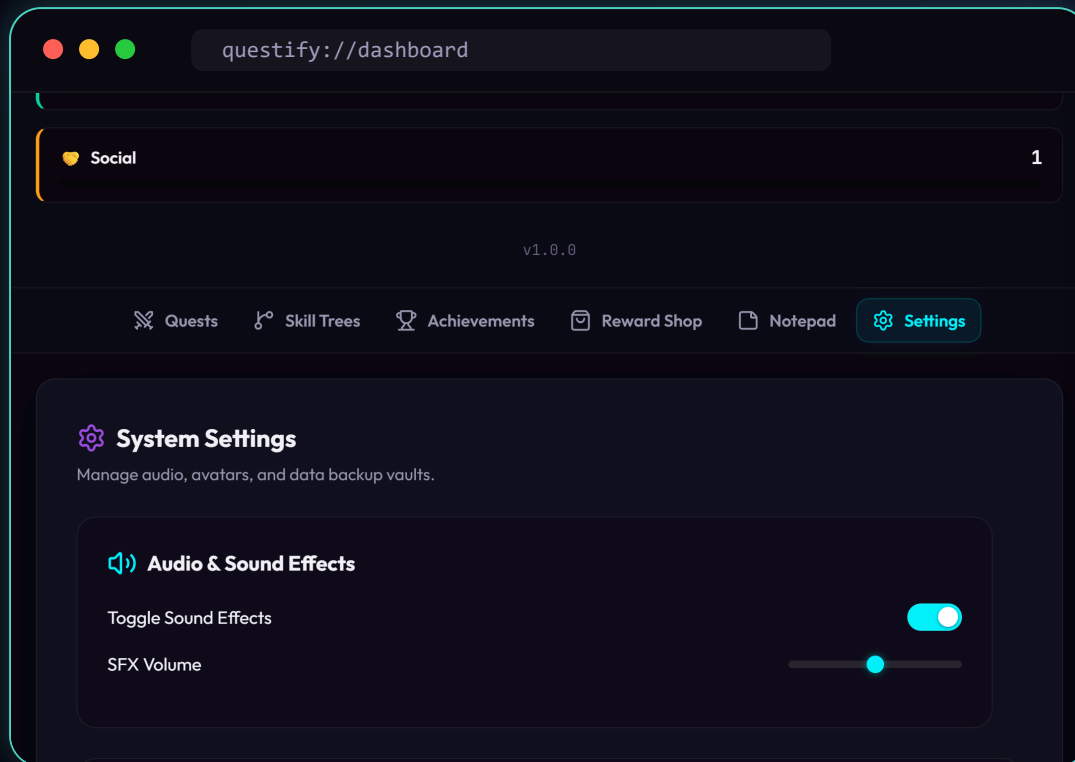

05. Notepad & Alarms Page 7

06. Settings & Backups Page 8

07. Standalone App Setup Page 9

Visual Tip: Print in landscape orientation with background graphics turned on to keep the gorgeous neon design.

01. Getting Started

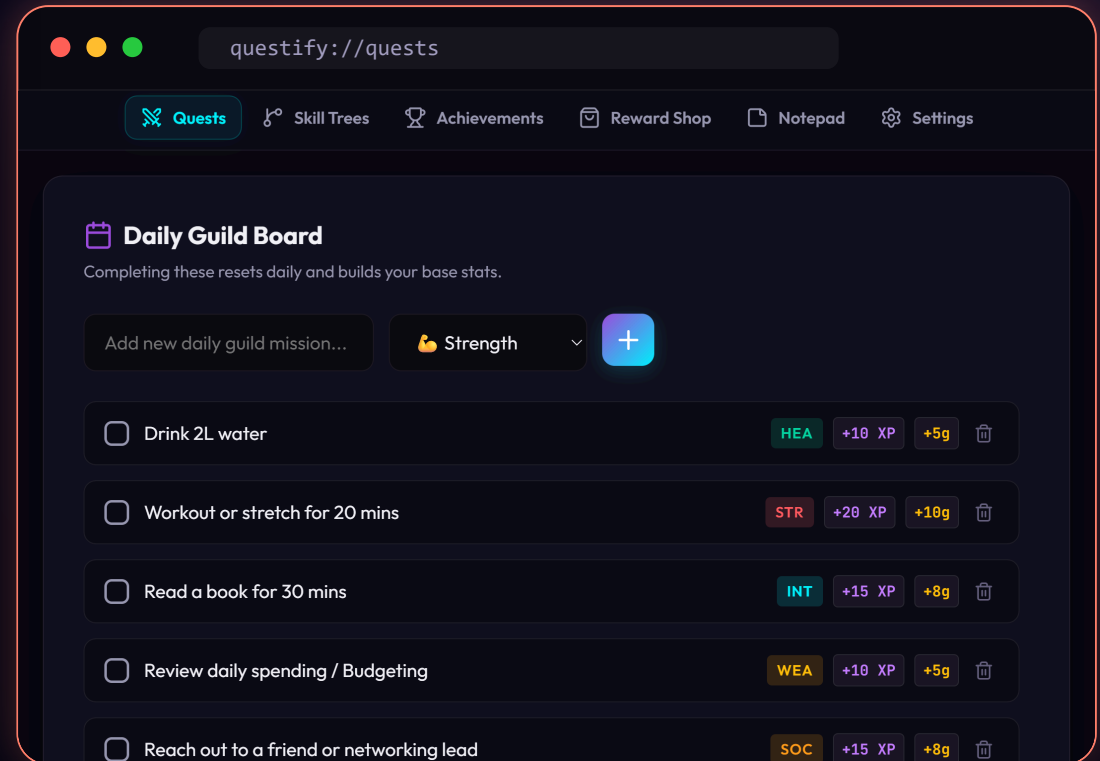

- 1 **Explore the Dashboard:** View your level, current XP bar, gold coins count, and the main navigation panel on the left sidebar.
- 2 **Rename Your Hero:** Click directly on the default name **Hero** to rename your character. Hit Enter to save your new identity.
- 3 **Customize Your Avatar:** Click your avatar circle in the sidebar to open the custom avatar generator. Click repeatedly to roll randomized elements!

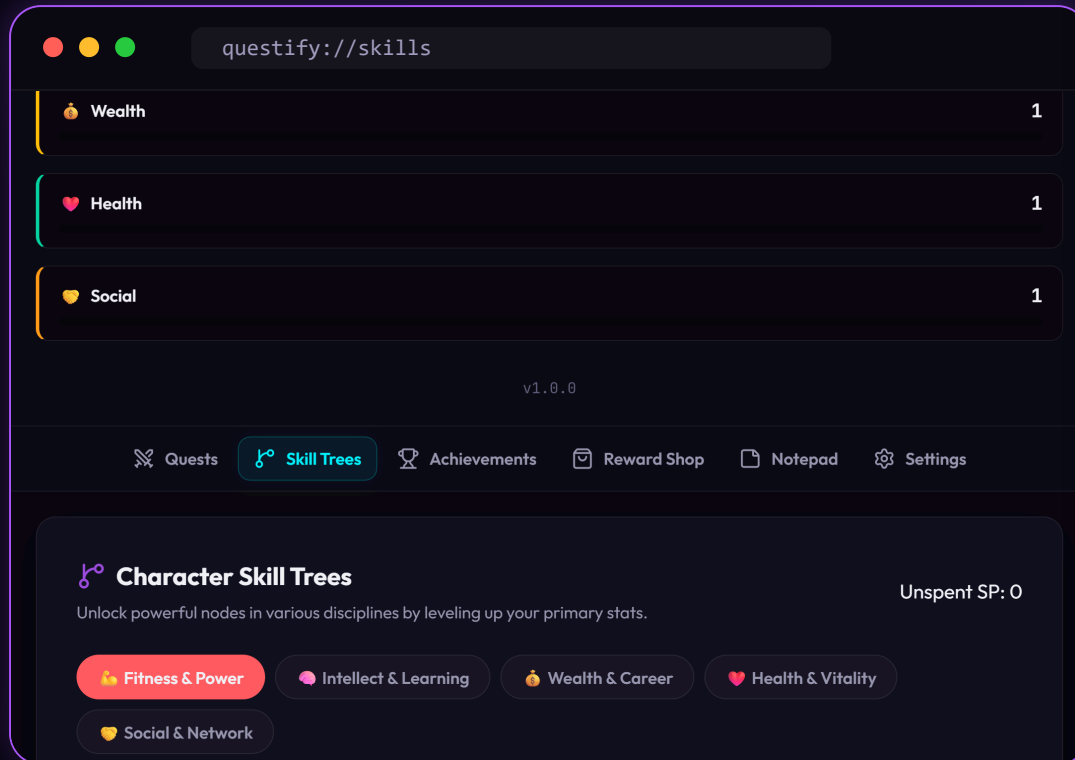

Stat Tracking: Complete tasks to gain XP, Gold, and raise your character attributes (Strength, Intellect, Wealth, Health).

02. Quests & Dailies

- 1 **Dailies vs Quests:** **Dailies** are repetitive habits (e.g. gym, study) that reset every single day. **Active Quests** are one-off to-do tasks.
- 2 **Create Missions:** Click **Add Daily** or **Add Quest**. Set a title, select a difficulty rating (Trivial, Easy, Medium, Hard), and link a stat attribute.
- 3 **Claim Loot:** Click the checkmark to complete a task. You will hear an 8-bit chiptune sound and receive Gold, XP, and stat points instantly!

Streaks: Completing Dailies consecutively increases your streak badge multiplier. Skipping Dailies resets the streak!

03. Skill Tree & Titles

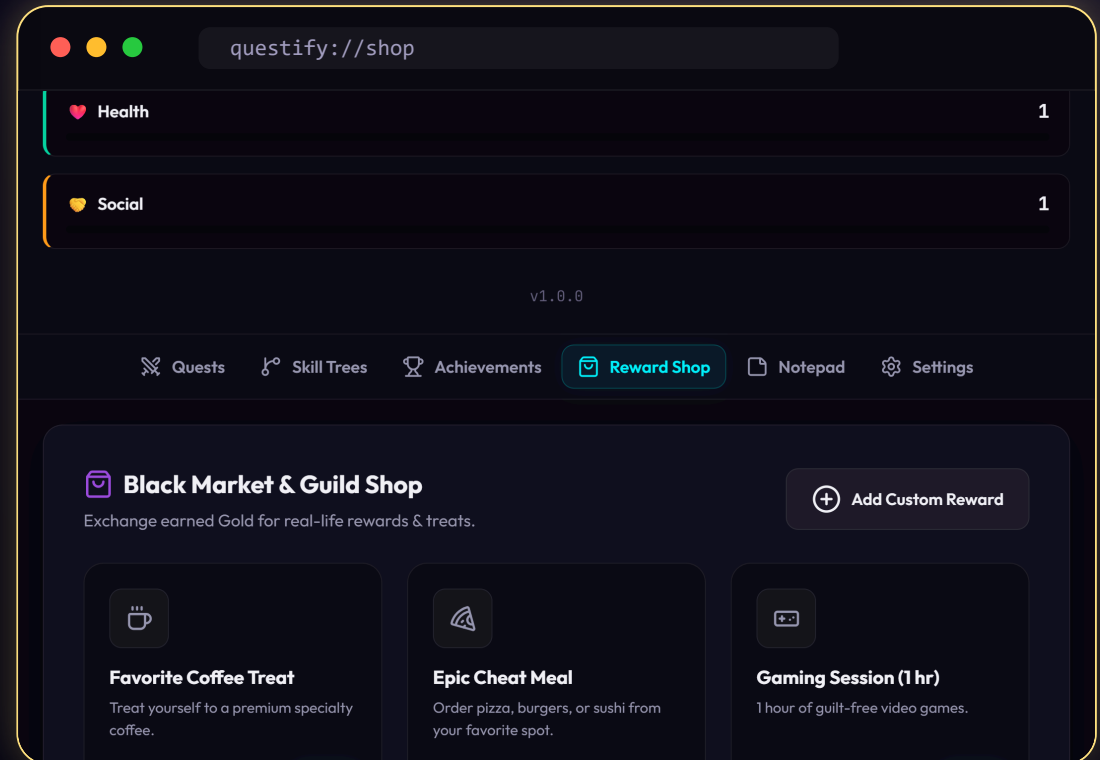

- Stat Requirements:** Each node in the Skill Tree (e.g. Acrobatics, Financial Freedom, Hydration Expert) requires a specific attribute score to unlock.
- Spend Gold:** Invest your hard-earned Gold coins to purchase and unlock skills. Unlocked nodes glow with neon animations.
- Unlocking Titles:** Unlocking skills grants passive title bonuses (e.g., Novice to Sage or Grandmaster) that reflect on your profile sidebar.

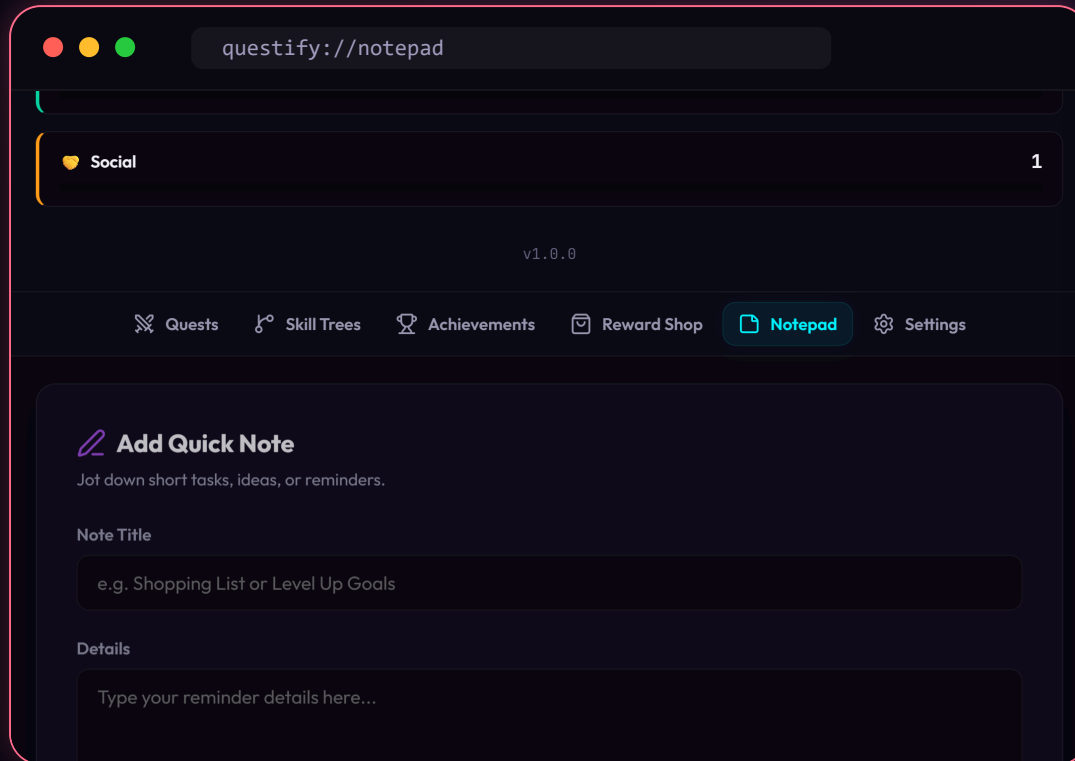

Progression: Focus on building balanced stats to unlock hybrid skills further down the skill paths.

04. The Reward Shop

- 1 **Set Custom Rewards:** Add real-life rewards (e.g. "Watch 1 episode of anime", "Eat ice cream") and assign them custom gold prices.
- 2 **Earn Shop Stock:** The shop also stocks automated consumable items like XP Boosters or Health Potions to assist your journey.
- 3 **Spend Your Gold:** Buy rewards using gold earned from quests. Buying triggers a satisfying shop sound and deducts gold.

Rule of Honor: Only indulge in your real-life rewards after you successfully buy them in the Reward Shop!

05. Notepad & Alarms

- 1 Create Sticky Notes:** Write down checklists or thoughts, pick one of the pastel background color tags, and click **Save Note**.
- 2 Set Datetime Alarms:** Specify a future date and time in the editor. Notes with set alarms display a glowing reminder badge.
- 3 Acknowledge Alarms:** When the time arrives, a flashing neon alarm modal overlays the app, accompanied by retro synth tones. Tap ****Acknowledge**** to silence.

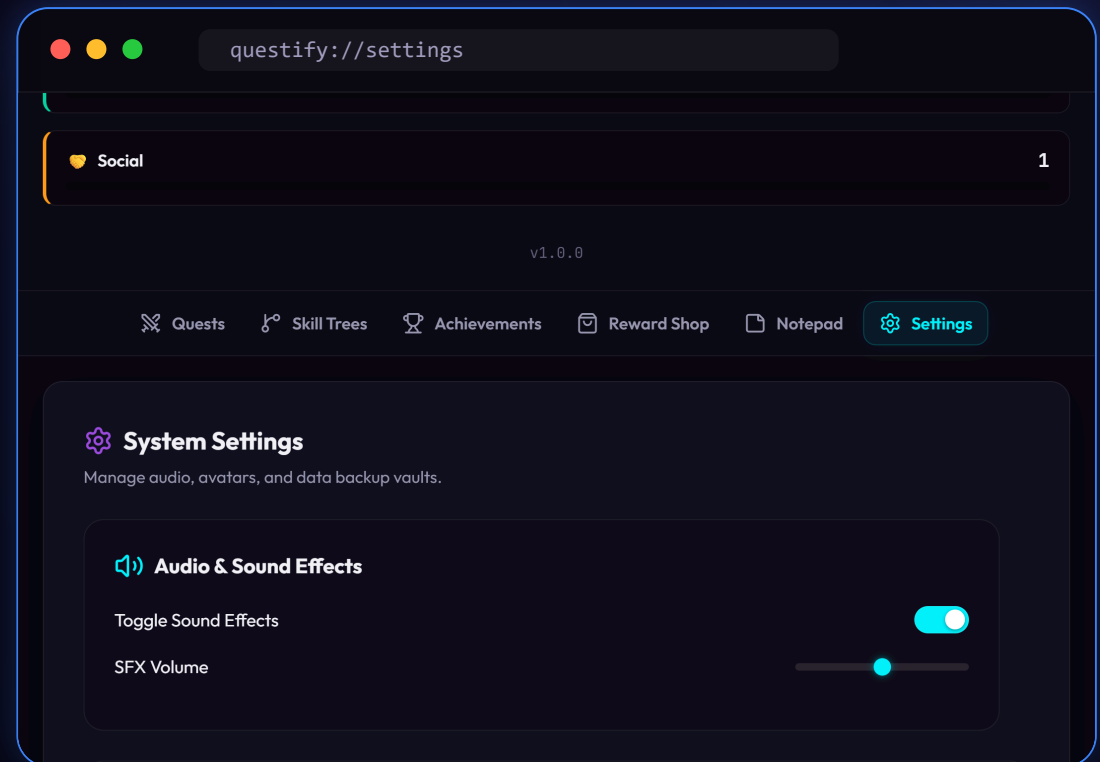

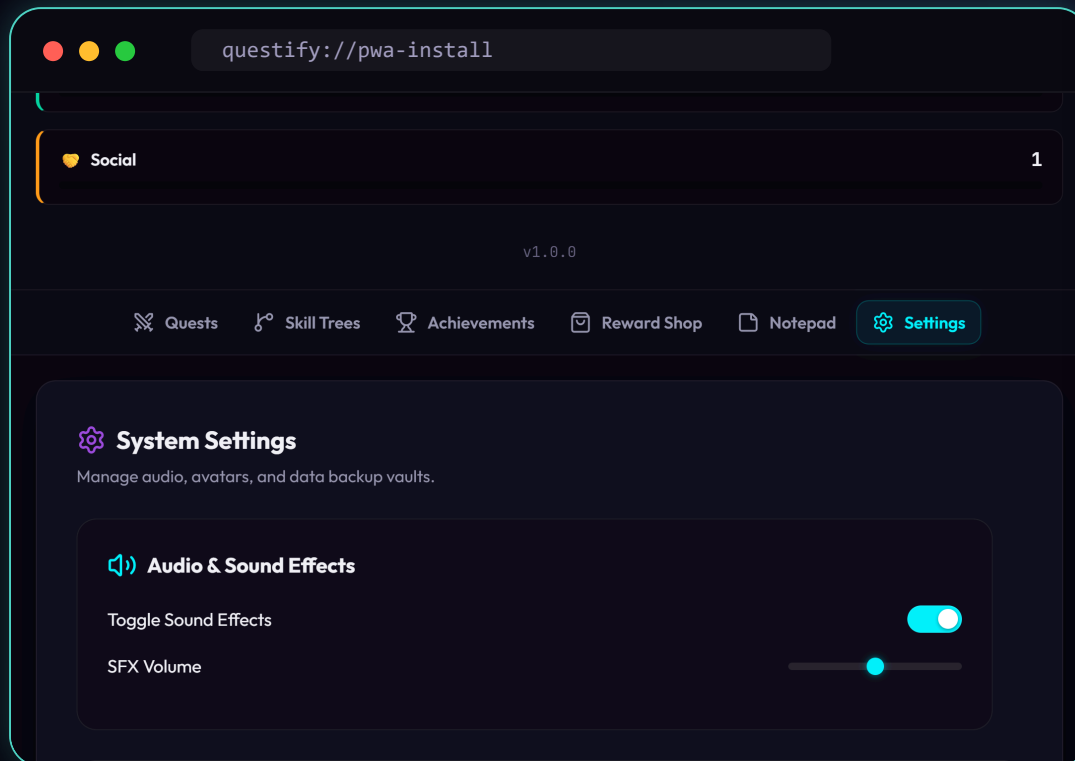

Focus Fix: Click any saved note card to automatically load its details into the editor and center focus on inputs for editing.

06. Settings & Syncing

- 1 **Audio Customization:** Toggle app sound effects on or off and adjust the global synthesizer volume using the interactive slider.
- 2 **Save & Export:** Click **Export State** to download your character progress, stats, shop items, and notepad items as a JSON text backup.
- 3 **Import & Recovery:** To play on another device, click **Import State** and paste your saved JSON data to instantly restore your adventure.

Warning: The "Reset State" button permanently wipes your locally saved hero data. Back up before resetting!

07. Standalone App Setup

- 1 **Progressive Web App (PWA):** Questify features native PWA integration, allowing it to be installed as a standalone app on both mobile devices and laptops, running 100% offline.
- 2 **On Laptops / Desktops:** Open the app folder or URL in Chrome or Edge. Look for the **"Install App" icon** (🖥️ +) in the right side of the address bar. Click install to add a standalone launcher to your desktop.
- 3 **On Mobile Devices (Android & iOS):** Load the app. On iOS Safari, tap the **Share button** and select **"Add to Home Screen"**. On Android Chrome, tap the **Menu (three dots)** and select **"Install App"**.

Zero Latency: Running as an installed PWA hides browser toolbars, runs in full-screen window, and uses local service worker caching for instant loading.
